PROFESSIONAL SUMMARY

- Having over with **6+ years** of experience as a **Software Engineer/ Full Stack Developer** with diversified exposure in analysis, design, development and implementation of web-based applications.
- Experience in **Spring Framework** modules such as **Spring MVC, Spring Data, JDBC, IO, Spring Boot, Micro services, Spring REST, Spring Data JPA**.
- Extensive experience delivering enterprise **ASP.NET MVC** applications across the SDLC, integrating **Oracle** databases, real-time updates with **SignalR**, responsive front-end technologies, and **IIS** deployments.
- Experience in web development skills using **HTML/HTML5, CSS/CSS3, JavaScript (ES5 & ES6), Bootstrap, Tailwind, ReactJS, Redux, VueJS, Vuex, Node JS, XML, AJAX, and JSON** which meets **W3C Web Standards**.
- Experience in implementing **Context API** and **Redux** for efficient state management in React applications, adeptly adapting each approach based on project scale and complexity.
- Experience in working with relational databases like **MySQL, PostgreSQL** and non-relational databases include **MongoDB**, writing complex **SQL Queries, procedures, Triggers and Stored Procedures**.
- **Mentored** and **coached** junior software engineers to improve technical skills and professional development.

TECHNICAL SKILLS

Languages	Java (8/11), JavaScript, C#
APIs	JDBC, JPA
Design patterns	MVC, DAO, DTO, N-tier, and Front Controller, Event Driven, Pub/Sub, Signal R
Frameworks	Spring, Spring Boot, Hibernate, Express, Micro services, Micro Frontend, .NET
Tools and Libraries	ReactJS, VueJS, NodeJS, Tailwind, SCSS, Bootstrap, ChartJS, Echarts, Redux, Vuex, NextJS, ThreeJS, TypeScript, Element UI, Entity Core, LINQ, Kafka, GraphQL, SignalR
Application Servers	Apache Tomcat, Nginx, NodeJS, IIS
IDE	Eclipse 3.x, IntelliJ, Visual Studio Code, Rider, Data Grip, Dbeaver
Build and Test Tools	Maven, Gradle, Junit, Mockito, Jest, Test Utils
Databases	MySQL, PostgreSQL, MongoDB, Oracle, PL/SQL
Operating Systems	Windows, MacOS, Linux
Source Control	Git, Git Extensions, Source Tree
Deployment	Docker, Swagger, GitHub Actions, Gitlab CI/CD, Terraform, AWS
Project Management	GitLab, Confluence, Jira

CERTIFICATIONS/BADGES

- **AWS Certified Solutions Architect**
- **Terraform** (Linkedin)
- Solutions Architect Knowledge Badge Readiness Path(AWS)
- Gener8tor Skills Program For Project Management
- **Generative AI**
- **MERN Stack** (Linkedin)
- **React** (TestDome)
- Project Management (Microsoft)

Software Engineer | SK Battery America | May 2024 - Present, Stanton, TN

- Extensive experience across the **Software Development Life Cycle (SDLC)**, including requirements gathering, system design, development, and testing for enterprise applications.
- Proficient in designing and implementing **MVC** architecture using **ASP.NET** to deliver robust **FMS**(Facility Monitoring Systems), integrated with **Oracle** databases.
- Advanced front-end development expertise with **HTML5, CSS3/SASS, JavaScript, jQuery**, and **Bootstrap**, building responsive and dynamic user interfaces.
- Hands-on experience with version control using **Git**, including mentoring teams on its adoption and best practices.
- Designed and implemented a notes-adding feature for the Facility Monitoring System (FMS), improving user interaction.

- Proficient in Oracle database management, writing **PL/SQL** stored procedures to streamline business logic, optimise data processing, and enhance querying efficiency in enterprise applications.
- Implemented **SignalR** for constant updates from the backend to the clients.
- Ensure robust logging and diagnostics using **Log4js**, with data persistence and reporting supported by **Oracle databases**.
- Implemented an **admin dashboard** to manage connected devices, monitor system health, and reset connections when required.
- Display **live equipment status** and continuously monitor all manufacturing equipment to improve operational awareness and response time.
- Track and analyze **equipment downtime** to identify recurring issues, reduce production interruptions, and improve overall efficiency.
- Familiar with deploying and managing web applications on **IIS** in ASP.NET environments, interfacing with Oracle databases for backend operations.
- Demonstrated leadership by mentoring junior developers, fostering team growth, and leading by example in collaborative **Agile/Scrum** settings.
- Effective communicator, participating in daily stand-ups and status meetings and coordinating with project managers to deliver regular updates.

Software Engineer | Foxconn Industrial Internet | July 2020 - May 2024, Mount Pleasant, WI

- Involved in various phases of **Software Development Life Cycle (SDLC)**, including requirements gathering, modeling, analysis, architecture design, prototyping, developing and testing.
- Involved in designing and implementation of **MVC** design pattern using **spring framework** for web-tier.
- Design and implement multiple enterprise applications using **Hibernate framework, Spring IOC, Spring MVC, Spring Boot, Spring JDBC, Spring Annotations, Spring Integration, frameworks, RESTful web services**.
- Implemented **Micro Services** into existing system architecture. Developed Micro Services business components and **RESTful** service endpoints using **Spring Boot and .NET Core**.
- Utilized **OAuth 2.0** protocol to enable secure authentication and authorization for **RESTful** APIs.
- Used ORM tool **Hibernate** along with spring framework to deal with database operations. Involved in development of **POJO** classes and writing **Hibernate query language (HQL)** queries.
- Developed and designed **UI** using **HTML5, CSS3/ SASS, JavaScript, JQuery, ReactJS/ VueJS, ContextAPI/ Redux/VueX, Node.JS and Bootstrap**.
- Implemented **Context API** and **Redux** for efficient state management in React applications, adeptly adapting each approach based on project scale and complexity.
- Highly used **ReactJS** to build a single page application and also used core components like **Components, Services, and Modules** to develop complex and robust **UI** pages.
- Implemented performance optimization techniques such as **lazy loading, code splitting, and memoization**.
- Implemented **internalization/localization** for user interaction, expanding accessibility and user engagement.
- Innovated **custom npm packages** using **JavaScript, NodeJS**, and published them to the internal npm registry.
- Used **Log4j** to capture the log that includes runtime exceptions.
- Developed **Jest, Test Utils, Junit**, and **Mockito** test cases to unit test the business logic.
- Setup the **Continuous Integration (CI) & Continuous Development (CD)** for the application using **Gitlab CI**.
- Actively involved in transitioning from traditional data center models to cloud-based solutions using **AWS services**.
- Experience in implementing **Kafka's** pub-sub model in an event-driven microservices architecture.
- Set up **Google Analytics** to track and analyze website traffic, user behavior, and engagement metrics.
- Worked on an **Agile (Scrum)** Development Team to deliver regular updates to business team and project managers.
- **Mentored** and **coached** junior software engineers to improve technical skills and professional development.

Full Stack Developer | Department of Mathematics | University of Mississippi | Jan 2020 - May 2020

- Developed an intuitive user interface with modern design principles using **React**, ensuring a seamless user experience for tracking attendance.
- Implemented **real-time data synchronization** and storage using **Firebase**, allowing instant updates and access to attendance records from various devices.
- Enforced state management techniques, utilizing **Context API** to efficiently manage application data and improve user experience.
- Created a secure user **authentication** system utilizing **Firebase Authentication**, safeguarding attendance data and providing role-based access control.

- Employed **Node.js** to build a robust and efficient backend, handling **data processing, business logic, and RESTful API** interactions with the frontend.
- Conducted thorough testing and debugging across different browsers and devices, addressing any compatibility issues and ensuring consistent functionality.
- Collaborated with a cross-functional team, including designers, developers, and project managers, to deliver a high-quality and feature-rich attendance tracking solution.

PROJECTS

Multi Agent Deal Discovery platform | Dec 2025 - Jan 2025

- Designed an end-to-end **GenAI** solution using **OpenAI** and **Perplexity** APIs, covering data **curation, preprocessing, prompt engineering, and inference**.
- Designed and deployed a **production-grade autonomous multi-agent AI system** that discovers, evaluates, and alerts users about online deals through intelligent web scraping and price analysis.
- Architected **7 specialized AI agents** with clear separation of concerns, including scanning, price estimation, RAG retrieval, neural prediction, messaging, and autonomous planning.
- Built an **ensemble price estimation pipeline** combining a fine-tuned LLM, RAG-based semantic retrieval, and a deep neural network for improved accuracy
- Fine-tuned and deployed a **custom LLM on modal.com serverless infrastructure** for domain-specific product pricing.
- Implemented **Retrieval-Augmented Generation (RAG)** using **ChromaDB** with **800+ product embeddings** and semantic similarity search.
- Developed a **deep neural network in PyTorch** with residual blocks and layer normalization for price prediction.
- Created an **LLM-powered autonomous planning agent** using function calling to orchestrate multi-step workflows.
- Built an **interactive Gradio web UI** with real-time agent logs and **3D vector space visualization (Plotly)**.
- Implemented production patterns including **structured outputs (Pydantic), JSON schema validation, error handling, and persistent memory**.
- Integrated multiple LLM providers (**Perplexity, OpenAI**) with fallback mechanisms for reliability.

Find Price | Dec 2025 - Dec 2025

- Designed an end-to-end **GenAI** solution using **OpenAI** and **Perplexity** APIs, covering data **curation, preprocessing, prompt engineering, and inference**.
- Built **NLP pipelines** to extract and **semantically analyze** Amazon product descriptions for price estimation.
- Implemented embedding based similarity search and **AI driven reasoning** to recommend cheaper alternative products.
- Orchestrated API integrations and model outputs to deliver cost-optimized, automated product insights.

Windows Portfolio | Jan 2023 - July 2023

- Created a captivating **portfolio** website based on **Windows 11 theme**.
- Built using **React** and **tailwind**, enforced **linting/code standards** using **ESLint/Prettier, and continuous integration/deployment** using **GitHub Actions**.
- Incorporated a dynamic **project gallery** showcasing previous work, complete with hover effects and modal pop-ups for detailed project views.
- Set up **Google Analytics** to track and analyze website traffic, user behavior, and engagement metrics.

Web Scraper | July 2022 - July 2022

- Automated USCIS scraping using **Puppeteer, NodeJs** to send case update messages, ensuring timely communication and efficient case monitoring.

Fabric Defect Detection | May 2018 – May 2018

- Developed and implemented defect detection in fabrics using **digital image processing** and **data visualization** techniques, enhancing quality control and ensuring product excellence.

EDUCATION

- **B.S. In Computer Science | The University of Mississippi | Oxford, MS | Overall GPA: 3.71 | May 2020 | Honor's Roll**
